To Whom it May Concern,

Re: “Jr Medical Science Liaison”

I would like to have applied for the position of Jr Medical Science Liaison, having seen the position advertised in LinkedIn. I believe I am good technical fit for the role.

Although I am an applied mathematician by training, I have worked at the interface between academic research and industry for over ten years, in the United Kingdom and Germany, primarily in therapy and imaging with medical ultrasound but also in other clinical areas, such as ultra-low field MRI. Because of this, I have worked in inter-disciplinary teams, understanding technical and clinical challenges and been able to communicate effectively between differing specializations. Through my experience, I have extensive contacts within the therapeutic ultrasound community: with industry, regulation and academia. Additionally, I understand the motivations of commercial organisations, clinicians and researchers. Because of my experience in the field, I believe I would be trusted and respected advocate.

I am currently working on a combined EEG-transcranial ultrasound imaging and therapy project, which have given insight into the structural, functional and connectional aspects of neurology.

I have permanent residency in Germany, living in Bremen, and speak conversational German. I am applying as there are structural changes at my current role which may reduce opportunities for development.

I am enthusiastic about this role as it creates tangible clinical impact in image-guided therapies. Insightec is the world leader transcranial ultrasound, having essentially established the field. It is a therapy which is currently revolutionizing many treatments, but also holds enormous potential.

Please find enclosed my CV, and let me know if you require any additional information.

Yours faithfully,

David Sinden
